In Charge of Secure Digital Infrastructures with genucenter

The Central Management Station genucenter enables you to inventory, configure, continuously monitor, and manage the security solutions from genua via a uniform GUI or via an API.

The basis is a tree structure of all products used, including the role-based assignment of administration rights. This overview allows you to keep an eye on the status of the IT security infrastructure from various perspectives at all times. It ensures that all systems are always up-to-date and running flawlessly. In addition to basic maintenance tasks such as software updates, further policy configuration modules are available for various product segments:

- VPN
- Mobile Work
- Remote Maintenance
- Firewalls & Gateways
- Diodes

Central Management Station genucenter

genucenter also enables the capturing of logs and status information as well as real-time statistics for individual systems. Various interfaces are provided for integration into existing monitoring systems.

This enables you to implement security policies consistently throughout the entire network. Organizations that reinforce their IT security with additional solutions can easily integrate these in the Central Management Station and provide them with proven configurations.

All Advantages at a Glance

Central role-based administration of the solutions from genua

Systematic implementation of security policies

Easy administration of grouped security systems

Integration in customer environments thanks to numerous interfaces

Scalable, highly available management architecture

Multi-client capable solution

Less Effort, More Security

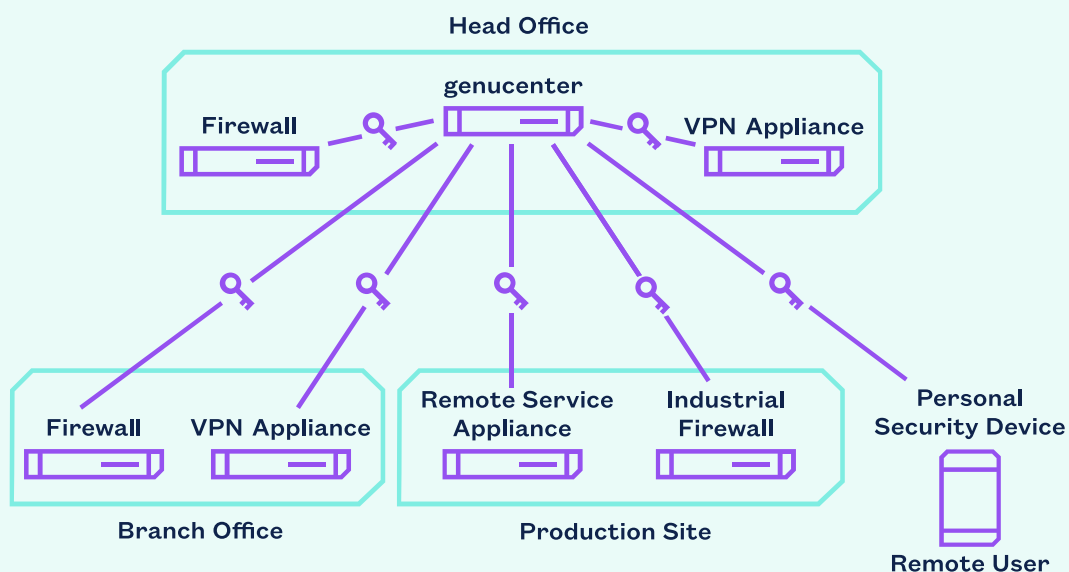

Your IT security systems must be supported and configured continuously. Using the Central Management Station pays off: the administrative effort is reduced while the security level improves.

The more complex your network, the greater your advantages. But even the administrators of small networks will definitely be relieved of numerous tasks by centrally managing the security systems – that, they can be sure of!

Conveniently Administrate Complex Networks

The desired structuring of rights can be hierarchically mapped in the management system. This domain concept is a key feature of genucenter.

You can define individual permissions based on roles and users and you can assign them to different areas, systems, and user groups. Using this tree structure, inherited configurations can be conveniently applied to many appliances – this saves administrative efforts, especially in the case of complex VPN configurations.

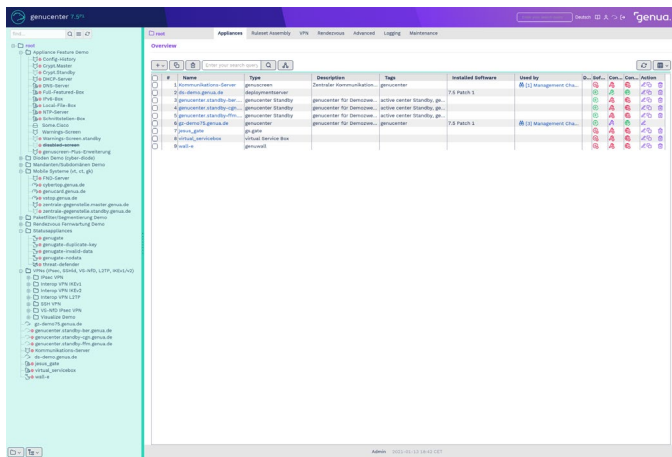

Central management with genucenter

» The management of IT security products is a complex task: genucenter makes it easy to get going and provides transparency. It seamlessly fits into uniform environments and enables secure IT infrastructures.

Distribute Tasks with Multi-Client Capable Solution

genucenter can handle multiple clients, which means that you can assign your administrators specific areas of responsibility. By means of a changelog, it is possible to determine who made what change and when they made it.

IT service providers that support several customers create these as clients. Providers can thereby manage numerous security systems located at various customers via the Central Management Station. The customers, in turn, are able to monitor all support work performed in their network via the genucenter's revisor access.

Full control over IT security with genucenter

Scalability through Flexible Architecture and Interfaces

No matter to what extent your genua infrastructure grows: genucenter protects your investment thanks to its modular scalability.

Various cluster modes guarantee availability or increase the number of simultaneous operations. Rollouts and routine operations can be performed flexibly at multiple locations thanks to the Deployment Server. Numerous interfaces enable the integration of third-party solutions. This includes, among other things, external user management, external log and SIEM solutions as well as automatable configuration changes via the genucenter REST API.

Central Management Station for Your Security Systems

The genua security solutions can be configured, administrated and continuously monitored using the standardized GUI of the Central Management Station. Thanks to this overview, it is easy to stay on top of your IT security and make sure all systems are up-to-date and running flawlessly. You can thus consistently implement your policies in the entire network.

Reasons Why

- Experts for the IT security of companies and public organizations
- Offer of a comprehensive, modular IT security portfolio
- Quality without compromise for all products, services, and processes

genua – Excellence in Digital Security

genua develops innovative, reliable as well as market-shaping products and solutions. Whether in the public sector, for the operators of critical infrastructures, in industry or in the protection of classified information: we provide answers to the IT security challenges of today and of tomorrow.
